

AI Challenge

42 x United Arab Emirates

Summary

- Introduction : massive data collection
- E-learning platform based on peer-to-peer pedagogy
- Tokenize the access to the translation service
- Conclusion

Introduction

- The specific case of Arabic language
- The role of AI
- A massive need of data
- Getting input from multiple platforms through our API

E-learning platform based on peer-to-peer pedagogy

- Using the community to create the datasets
- Centralized access to multiple language learning resources
- Possibility to create your own exercises and games
- Peer evaluations to improve the algorithm

Tokenize the access to the translation service

- Rewards for the most active contributors
- Regulated public access to the translation solution
- Increased community involvement

To conclude

- Low cost
- Small requirements from the start
- Fast growing datasets
- Transparent use of data
- Useful experience for the users, who participate in creating an impactful product that could be used by everyone, and get to see its improvement in real time
